

Digital Specific Gravity Balance for solids

MODEL: 0801-8001

This is the ESLPL® most popular yet simplest to use, accurate and economic model of digital specific gravity balance which can be used to test specific gravity of solid materials like Rubber, PVC, Plastic, Metal, Wood etc. Being load cell as a base of measurements It covers a wide range of specific gravity which goes 0.01 to 22.000. The weight sample should be in between 2 grams to 50 grams in air as well as in water.

Specifications	Available Options
----------------	-------------------

Specimen :	solid materials like Rubber PVC Plastic Metal Wood etc.
Range :	0.010 to 22.000
Repeatability Error :	+/- 0.002
Specimen weight :	2 to 50 grams
